WORK EXPERIENCE

Mini Project for IOT and Information Engineering

2023 Door Latch

(DIGITAL INTELLIGENCE QUOTIENT Group Project)

Helps increase the security level of entry and exit of the house or various places By allowing access only to those with the correct password

Allows users to control entry and exit via Keypad

2023 Chillflow application

(MOBILE APPLICATION DEVELOPMENT Group Project)

This site offers Lofi music via Spotify without lyrics or with only non-distracting music to help users focus on work, study or relaxation. There is also a timer function for users who want to time their time on the site to work or read.

Responsible for : use Figma to design the application Icon, tool bar and make wireframe and presentation

2024 INSIGHT TV

(ARTIFICIAL INTELLIGENCE OF THINGS Group Project)

INSIGHT TV is a tool that uses individual channel viewing data from different platforms to calculate which platforms viewers will use the most in the future, giving advertisers more information to select channels and platforms where viewers are most interested.

Responsible for : use Figma to design the lay out the website outline and decorate the interior of the application and presentation

Education

(2022 -present)

Bachelor's degree in IoT and Information Engineering
King Mongkut's Institute of Technology Ladkrabang
